

Soil Judging

By: Grace Claycamp

Trinity's FFA members recently competed in a soil judging contest. Soil Judging consists of many different teams that go to both home sites and agricultural sites to determine different characteristics of the soil. A contestant must be able to determine texture, color, and how well crops would grow in the area or how to build a house in that spot.

Trinity had three different teams at the recent competition. Team one scored 720 points and placed 15th in the competition. This team consisted of Conner Sims with a score of 267 points, Kade Hill with 227 points, and Logan Brown with 226 points. Trinity's team two scored a total of 717 points and placed 16th. Team 2 consisted of Matthew Cobb with 254 points, Drew Kerkhof with 236 points, Jasmine McCormick with 227 points, and Preston Kovener with 141 points. Trinity's third and final team scored 693 points and placed in 19th place. On the third team was Levi Pottschmidt with 235 points, Nathan Voelker with 233 points, Bell Vancuren with 225 points, and Peyton Pollert also with 225 points.
